Career Objective

Passionate frontend developer aspiring to become a software engineer who solves real-world complex problems and delivers impactful solutions. I focus on analyzing challenges from the root cause and strive to build efficient, scalable, and user-focused outcomes

Technical Skills

Programming Languages: JavaScript, Java, C, C++

Frontend: HTML5, CSS3, Tailwind CSS, React.js, Framer Motion

Backend: Node.js, Express.js, Firebase Functions

Database: MongoDB, Firebase Realtime DB

Tools & Libraries: Git, GitHub, REST APIs, Firebase Auth/Admin SDK, Stripe, TanStack Query, Axios

Soft Skills

Communication, Teamwork, Problem-Solving, Leadership, Analytical Thinking, Active Listening, Responsibility

Projects

Personal Projects

SkyTower – Building Management System

Live Site — Client — Server

- Developed a role-based system with separate dashboards for admin, users, and managers
- Enabled users to pay rent, manage agreements, and view announcements seamlessly
- Integrated secure authentication, animations, and real-time data fetching

Technologies: React, Tailwind CSS, Framer motion, TanStack Query, Axios, Firebase Auth, Stripe, Node.js, Express.js, MongoDB, Firebase Admin SDK

Share and Care – Community Food Sharing Platform

Live Site — Client — Server

- Developed a platform enabling users to donate food, track donations, and request food from the community
- Implemented real-time updates for donation and request statuses to enhance user experience
- Built a responsive frontend and scalable backend to handle multiple users and data transactions efficiently

Technologies: React, Tailwind CSS, Framer Motion, TanStack Query, Axios, Firebase Auth, Express.js, MongoDB

Team Projects

PawfectMatch – AI-powered Pet Adoption Platform (Hackathon Project)

Live Site — Client — Server

- Built the frontend with React, Tailwind CSS, Framer Motion, and TanStack Query for smooth UI and fast data caching
- Implemented secure API communication using Axios interceptors with authorization handling
- Developed RESTful APIs with Express.js and MongoDB for backend operations
- Added offline support with Dexie.js, enabling users to view posts and create pet accounts offline with auto-sync on reconnection

Technologies: React, Tailwind CSS, Framer Motion, TanStack Query, Axios, Dexie.js, Express.js, MongoDB

Education

Islamic University of Technology (IUT)

2024 – Present

BSc in Software Engineering – CGPA: 3.88/4.00

Hackathons & Achievements

- Top 10 in CodeSprint Hackathon (out of 35+ teams)
- Top 15 in CodeRush Hackathon (out of 40+ teams)
- Solved 130+ problems in Codeforces
